Food reformulation, Cookies, Multiple criteria, Eating behaviour children, Health

Centres d'intérêt : Cooking, swimming, hiking

Development of a multi-criteria reformulation strategy targeting on children 7-12 years old: A case study on cookies

Graphical abstract

Objectifs

1. Development of a multi-criteria reformulation strategy to make a healthier product targeting on children (7-12 years old) while maintaining sensory properties and liking
2. Evaluation the impact on in vitro digestion and childrens' behaviour

Techniques utilisées

- Quantitative Descriptive Analysis (QDA)
- Free sorting task
- Liking study among children
- Instrumental analysis (texture, density, water content, water holding capacity, microscopy, viscosity)
- Pilot hall (plateau frece)
- In vitro digestion
- Approaches such as multi-criteria mapping, outlier approach
- Statistical analyses
